These types of macros are generally referred

# Read Free Microsoft Access 2010 Vba Macro

to as user interface macros. Access 2010 was the first version to introduce the concept of data macros. A data macro allows you to automate tasks and add functionality directly to your tables. Data macros and their actions are attached to specific table events such as when you add a new record to a table.

Macros have come of age in Access 2010. I view this new macro environment as an automated interface to produce procedural code. The macro interface in previous versions was a menu driven way of creating automated tasks. It was very limited to automating simple tasks. Most Access developers disdained

Perform system-level actions You can carry out the RunApp action in a macro to run another program (such as Microsoft Excel) from within Access, but you can't use a macro to do much else outside of Access. By using VBA, you can check to see whether a file exists on the computer, use Automation or Dynamic Data Exchange (DDE)

to communicate with other Microsoft Windows-based programs, such as Excel, and call functions in Windows dynamic-link libraries (DLLs).

## **Introduction to Access programming - Access**

If you name a macro Autoexec, Microsoft Access automatically runs it when your database opens. You

# Read Free Microsoft Access 2010 Vba Macro Programming

can also open Microsoft Access from a command line and specify a macro name after the /x switch to run it when it opens. For instance, you can run the macro named MyMacro like this:

When a database starts, Access runs the AutoExec macro before

# Read Free Microsoft Access 2010 Vba Macro Programming

it runs any other macros or VBA code. Create an AutoExec macro. If you have already created a macro that contains the actions that you want to occur when the database starts, just rename the macro to AutoExec, and it will run the next time that you open the database. Otherwise, follow these steps to create a macro: On the Create tab, in the Other group,
